

# Sinclair Gordon Fuh

Alexandria, VA 22304 (Willing to Relocate) | sfuh1@umbc.edu | 571-970-7908 | <https://www.linkedin.com/in/sinclair-fuh/>

## PROFESSIONAL SUMMARY

---

Full-stack software engineer with an M.S. in Computer Science and hands-on experience developing long-term, scalable software. Supported federal research with custom data pipelines and full stack Django apps at the DEVCOM army research lab. Developed mission critical intelligence platform at Lyteforge with a focus on concurrent data pipelines and Python microservices/APIs. Actively seeking work due to a funding crisis at Lyteforge.

## EDUCATION

---

### University of Maryland, Baltimore County

*M.S. in Computer Science. GPA: 3.65.*

12/2023

### St. Mary's College of Maryland

*B.S. in Computer Science, Minor in Mathematics.*

05/2019

## EXPERIENCE

---

### Backend Developer

07/2025 – 05/2026

#### Lyteforge

- Built concurrent, RESTful API microservices using Python, Flask, Celery, SocketIO, and MongoDB to power an intelligence platform that enables real time decision making for military personnel on the field
- Developed cloud data ingestion pipelines using Python, Celery, Kafka, and RabbitMQ to process ~100 million multi-attribute entries from Azure Blobs and AWS S3 into MongoDB at ~1 million entries per five minutes, establishing a datalake for our intelligence platform
- Designed graph databases using MongoDB that support an arbitrary amount of edges, ensuring scalability of intelligence platform as new features are rapidly prototyped
- Optimized database indices and query patterns for geolocation and address data, reducing query time by ~95% and enabling practical lookup times for end users
- Collaborated with the frontend team to diagnose and resolve API connectivity issues via development console and Node.JS
- Managed and debugged development, testing, and production deployments using Kubernetes, GitLab, and Rancher

### Full Stack Developer

03/2023 – 12/2023

#### Devcom Army Research Laboratory

- Developed full stack web app for DEVCOM's AI models using Django, React.JS, Javascript and Python for federal research, enabling federal investors to interact directly with their proprietary AI models
- Integrated multimodal AI models into web app, providing direct user interaction between user and AI where there was previously none
- Automated AI data cleaning/parsing process using Python, JavaScript, and Node.JS, saving federal AI researchers the effort to do so manually
- Modeled real-world Robotics using virtual reality, enabling a digital representation of AI that normally only interacts with physical robots
- Maintained version control in GitLab and authored technical documentation for future development

## PROJECTS

---

### AI Wordle Bot ([Link](#) | [Github](#))

03/2025

- Developed a Wordle-solving agent in Python achieving a 99% win rate across approximately 1,400 words using decision trees
- Developed Single Page Application frontend for AI wordle bot using Next.JS
- Deployed and hosted the application online using AWS Amplify at <https://brazenkind-wordle-solver.com/>

### UX Rescue Website Redesign

10/2023 ~ 11/2023

#### UX Rescue

- Led cross-disciplinary meetings to identify and resolve challenges with company website architecture
- Provided coding consultation to UX designers on technical feasibility of proposed designs, ensuring future implementation of our teams' design don't cause unnecessary debugging efforts for developers

## SKILLS

---

**Programming Languages:** Python, Java, JavaScript, TypeScript, C#, HTML, CSS

**Backend Development:** Flask, Celery, SocketIO, WebRTC, Django, RabbitMQ, Kafka

**Frontend Development:** HTML, CSS, Javascript, React.JS, Angular, Node.JS, Next.JS

**Containerization:** Docker, Kubernetes, Rancher, Podman

**Data/Cloud Engineering:** MongoDB, SQL, Pandas, NumPy, AWS, Azure
